**Problem Description:**

Reference attached JPEG images

TAS has experienced a broken MER fan assembly attach screw.

The screw broke off while attempting to remove the fan assembly from the MER.

TAS troubleshooters note that the only course of action at this time is to replace the entire P/N C13090AA MER assembly, which is difficult, time consuming and costly to the TAP program.

TAS notes that the blocks holding the inserts that secure the fan assembly are attached to the MER with screws and are easily removable.

Please provide the P/N of the insert block shown in the attached JPEG images. EoM
